Any question about immunizations you may discuss with your provider during your visit or call our office at 502-896-8868.

General reactions: After immunizations, some children may experience reactions which are usually mild in nature. They may include:

- Low grade fever and fussiness for 24 to 36 hours.
- Tenderness and swelling at the injections site.
- A firm, yet painless knot at the injection site which may persist for a week.

Immunizations are a vital component to a child's good health and are one of the major reasons for decreased childhood mortality. A current immunization certificate is required by the state of Kentucky for all children entering day care, preschool, and school.
